LEARNING

Human Centred AI

Humain Champs

AI Literacy Course

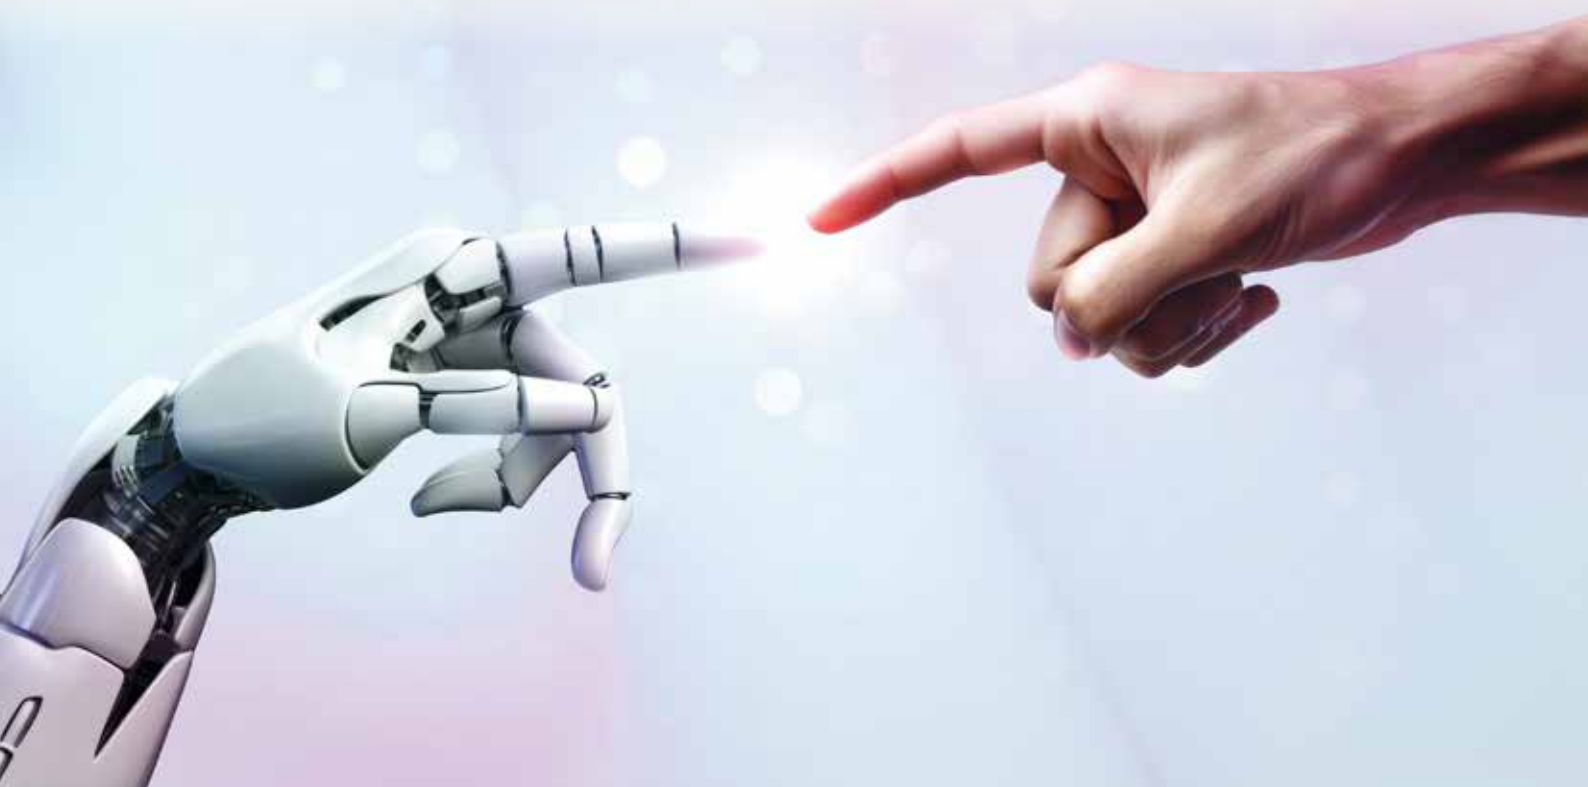

Our Purpose

"We exist to put humanity at the heart of the AI age, nurturing self-aware learners who harness technology while staying rooted in their deepest human essence."

Who We are

At Humain Learning, we believe the future of education lies at the intersection of human values and artificial intelligence. Our name reflects our core philosophy: HUMAIN, putting the human at the center of technological transformation. Founded by Harvard and Cambridge University alumni, our work is rooted in progressive pedagogy, deep inquiry, and international research.

We are not here to simply teach AI tools. We are here to nurture critical thinkers, empathetic humans, and responsible creators who will lead in an AI-driven world.

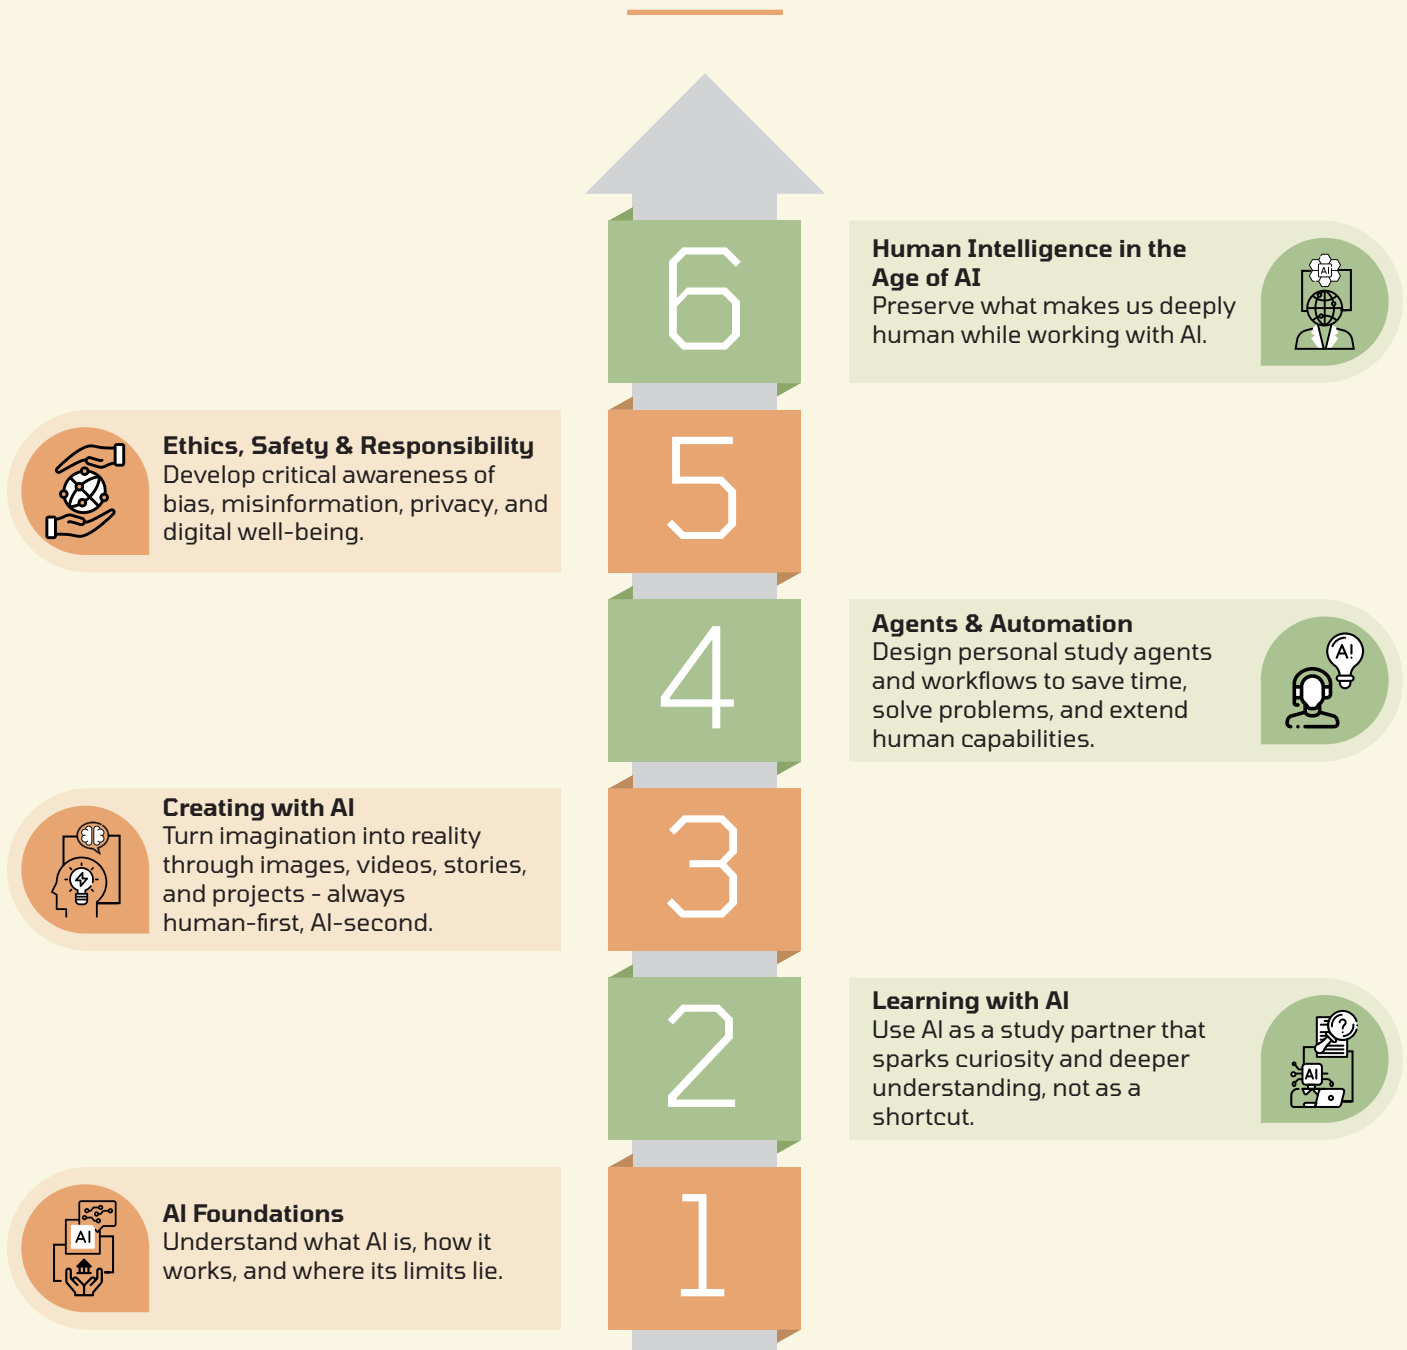

Meet the Founder

With over 25 years of experience in education, our founder Manit - Harvard Alumnus, has worked with schools, teachers, and students across India. He has founded The Heritage Xperiential Learning Schools - which have been ranked number 1 consistently in the country. His expertise in combining pedagogy with technology enables us to design learning journeys that prepare students for the AI-first future while staying grounded in values that matter.

Humain AI Literacy Framework

At Humain Learning, we believe that AI literacy is not just about tools, it is about nurturing thinkers, creators, and responsible humans. Drawing on international frameworks such as OECD, the European Commission's AI Literacy Framework, and UNESCO's AI Competencies, we have crafted a uniquely human-centered approach: the Humain AI Literacy Framework.

The 6 Pillars of the Framework

Benefits for Students

- ✔ **Smarter Learning** – Build AI study assistants and personalized tools to make studying easier and exam prep more effective.
- ✔ **Creative Expression** – Use AI to design avatars, generate videos, music, images, and stories, bringing ideas to life.
- ✔ **Future-Ready Skills** – Gain hands-on experience with AI for careers, entrepreneurship, and innovation.
- ✔ **Responsible AI Use** – Learn to detect bias, spot fake news, and use AI safely, ethically, and critically.
- ✔ **Personal Growth** – Develop emotional balance, resilience, and human values while mastering AI.

Feedbacks

AI for better learning

"The most interesting part for me was using AI for learning. I actually use tools beyond ChatGPT to study now — I am able to create 50–60 quick flash cards to revise for my exams. This experience really shifted my perspective on how AI can support learning."

Divyank Sharma, The Heritage school, D-II, Vasant Kunj, New Delhi

Ready for the future.

"While attending the training, it felt like I was living in the future. By the end, I was ready to step into it with confidence."

Karan Gupta, Grade 11, Lucknow

Confident with AI

"After attending all the sessions, I now understand how to use AI to my advantage - instead of just following the crowd. I feel confident about using it now."

Aniisha - 11th, The Heritage School, New Delhi

Inspiring others.

"I've showcased my AI projects and shared my learnings with friends. Now, many of them are excited to join the course too!"

Priya Nair, Grade 8, Kochi

Surprised my parents with AI

"I converted a photo of my parents into a new image, they were amazed and surprised at how I did it! I am very happy that I have joined this training program."

Pavani Singh - 6C

Creating my own AI agents

"I really liked creating AI agents because it helps automate tasks by connecting different apps — and the best part is, there's no need to write any code. The way the Humain Learning mentors explained everything was very clear and easy to understand. Now, I feel more confident using these AI tools in my daily tasks."

Kritika K - 8th, The Sanskaar Valley School, Bhopal

From hesitation to growth.

"At first, I was hesitant because AI was completely new to me. But the mentors guided me patiently and made me feel supported throughout the training."

Sneha Iyer, Grade 9, Bengaluru

Bringing memories to life

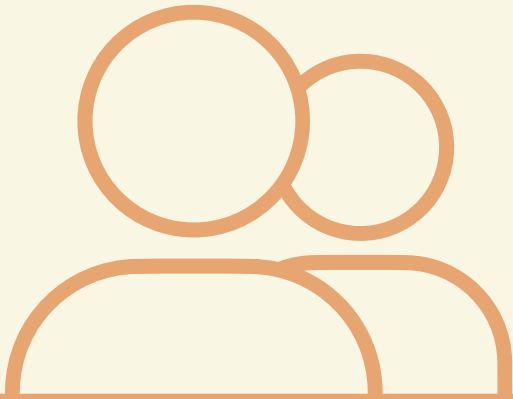

"In the modules, we learned how to bring memories back to life. I used a photo and created a video - created music using AI apps. It felt great to create something that is in my mind."

Aradhya Kinra - 8E, The Heritage School, Rohini, New Delhi

Clarity without losing human thinking.

"I knew AI was powerful, but I wasn't sure how to use it for my benefit. This course gave me clarity—how to leverage AI without losing my own thinking ability."

Aditya Verma, Grade 12, Jaipur

Responsible AI education for the next generation

"I'm grateful for this well-organized workshop that introduced children to AI. While there are concerns around AI governance and market-driven control, it's encouraging to see platforms like Humain Learning taking the lead in educating the next generation to utilise AI responsibly and safely.

At home, I often discuss these things with Ayesha. She actively explores tools like ChatGPT. The structured modules and creative exercises made the experience meaningful and the discussions on responsible use of AI were insightful. This is a strong and much-needed start for students.

Best wishes to your team for continuing this work across the country!"

Dr. Tshering (Ayesha's Parent)

Guidance tailored for children

"The world is moving towards AI, and Aradhya was truly keen to learn. Though I know about AI tools, it was amazing to see her guide me — showing how AI breaks down emails right on my screen. This course is a great step that we have taken. I deeply appreciate the guidance and thoughtful design made specifically for kids. Thank you!"

Nitin (Parent of Aradhya)

A whole new way of learning

"My child's learning style has changed after this course. She now uses NotebookLM and other AI tools confidently, which are helping her study better. She even built her own study buddy agent during the program - and now looks forward to reading emails from her AI buddy every day to continue learning."

Mr. Rajesh Malhotra, New Delhi

Learning responsibility with AI

"My child is now teaching me about AI! I was amazed by the excitement with which they explained its capabilities. What I really appreciate about Humain Learning trainers is that they didn't just focus on the tools, but also on how and how not to use AI. The emphasis on both the positive and negative aspects of relying on AI was very reassuring as a parent."

Mrs. Meenakshi Rao, Bengaluru

Balancing creativity with safety

"My child created a beautiful family video which we shared in our family group. At the same time, he is also reminding everyone in the family not to share personal photos or videos publicly. It's wonderful to see that he not only learned creative uses of AI but also the importance of safety while using it."

Mrs. Farah Khan, Mumbai

FAQ

Q: Who is this course for?

Students aged 13+ from any board or background.

Q: Do students need prior coding knowledge?

No. The course is designed for beginners with zero technical background.

Q: How will classes be conducted?

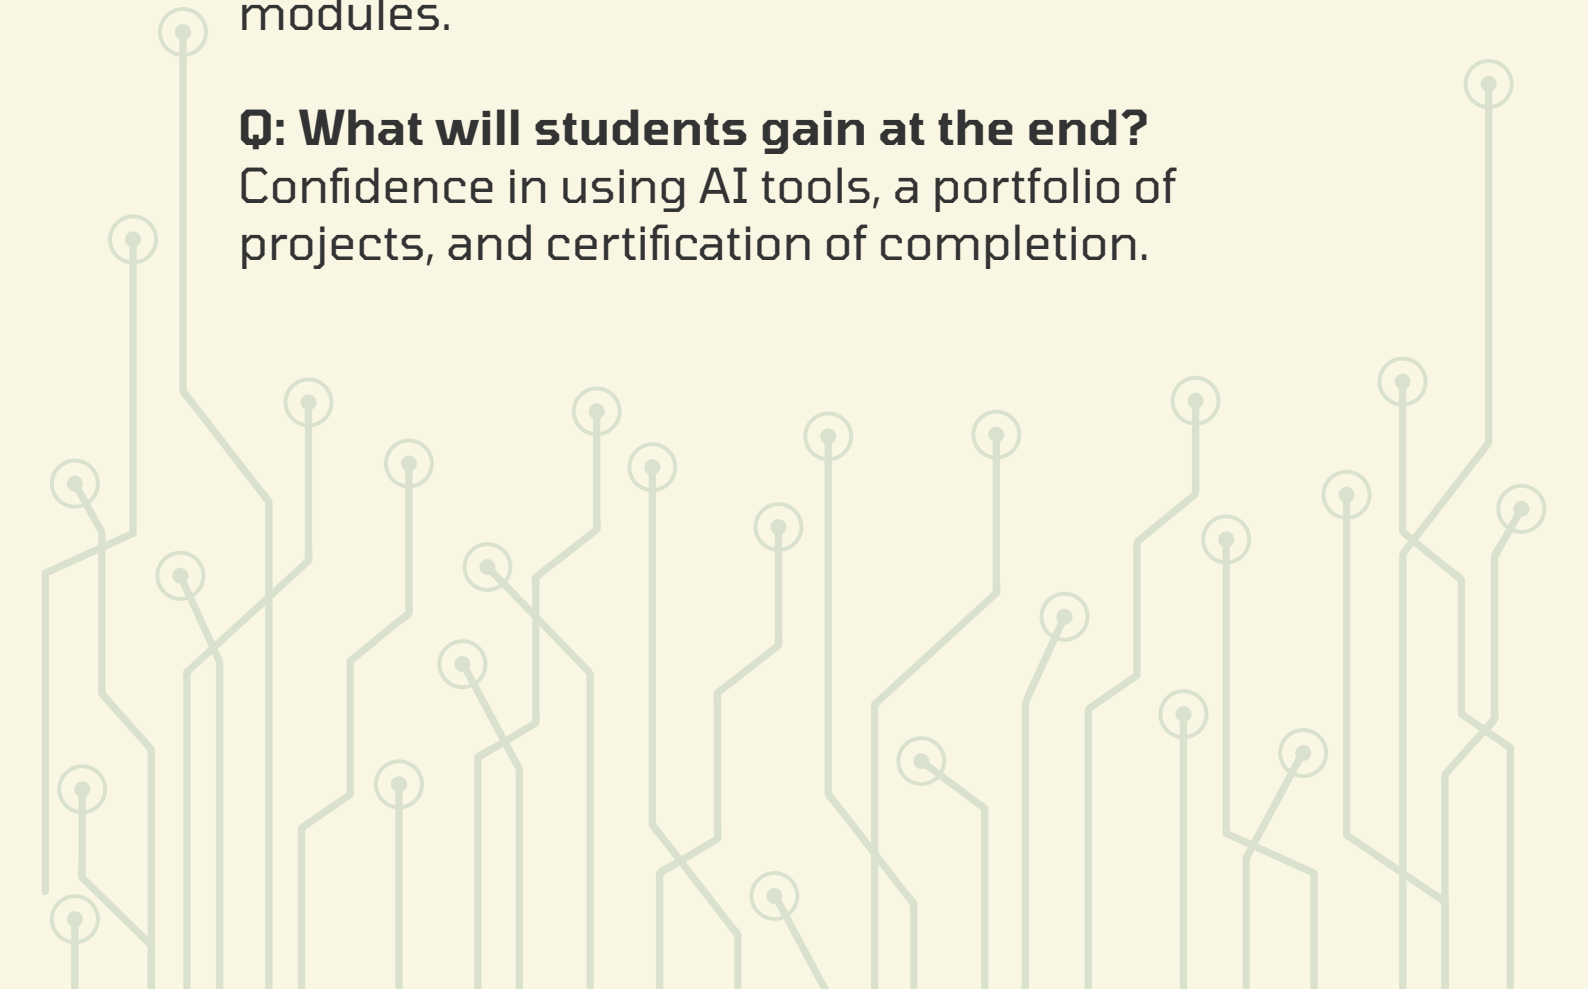

Live online interactive workshops, supported by recorded material and projects.

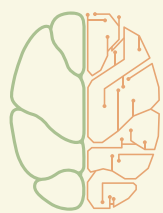

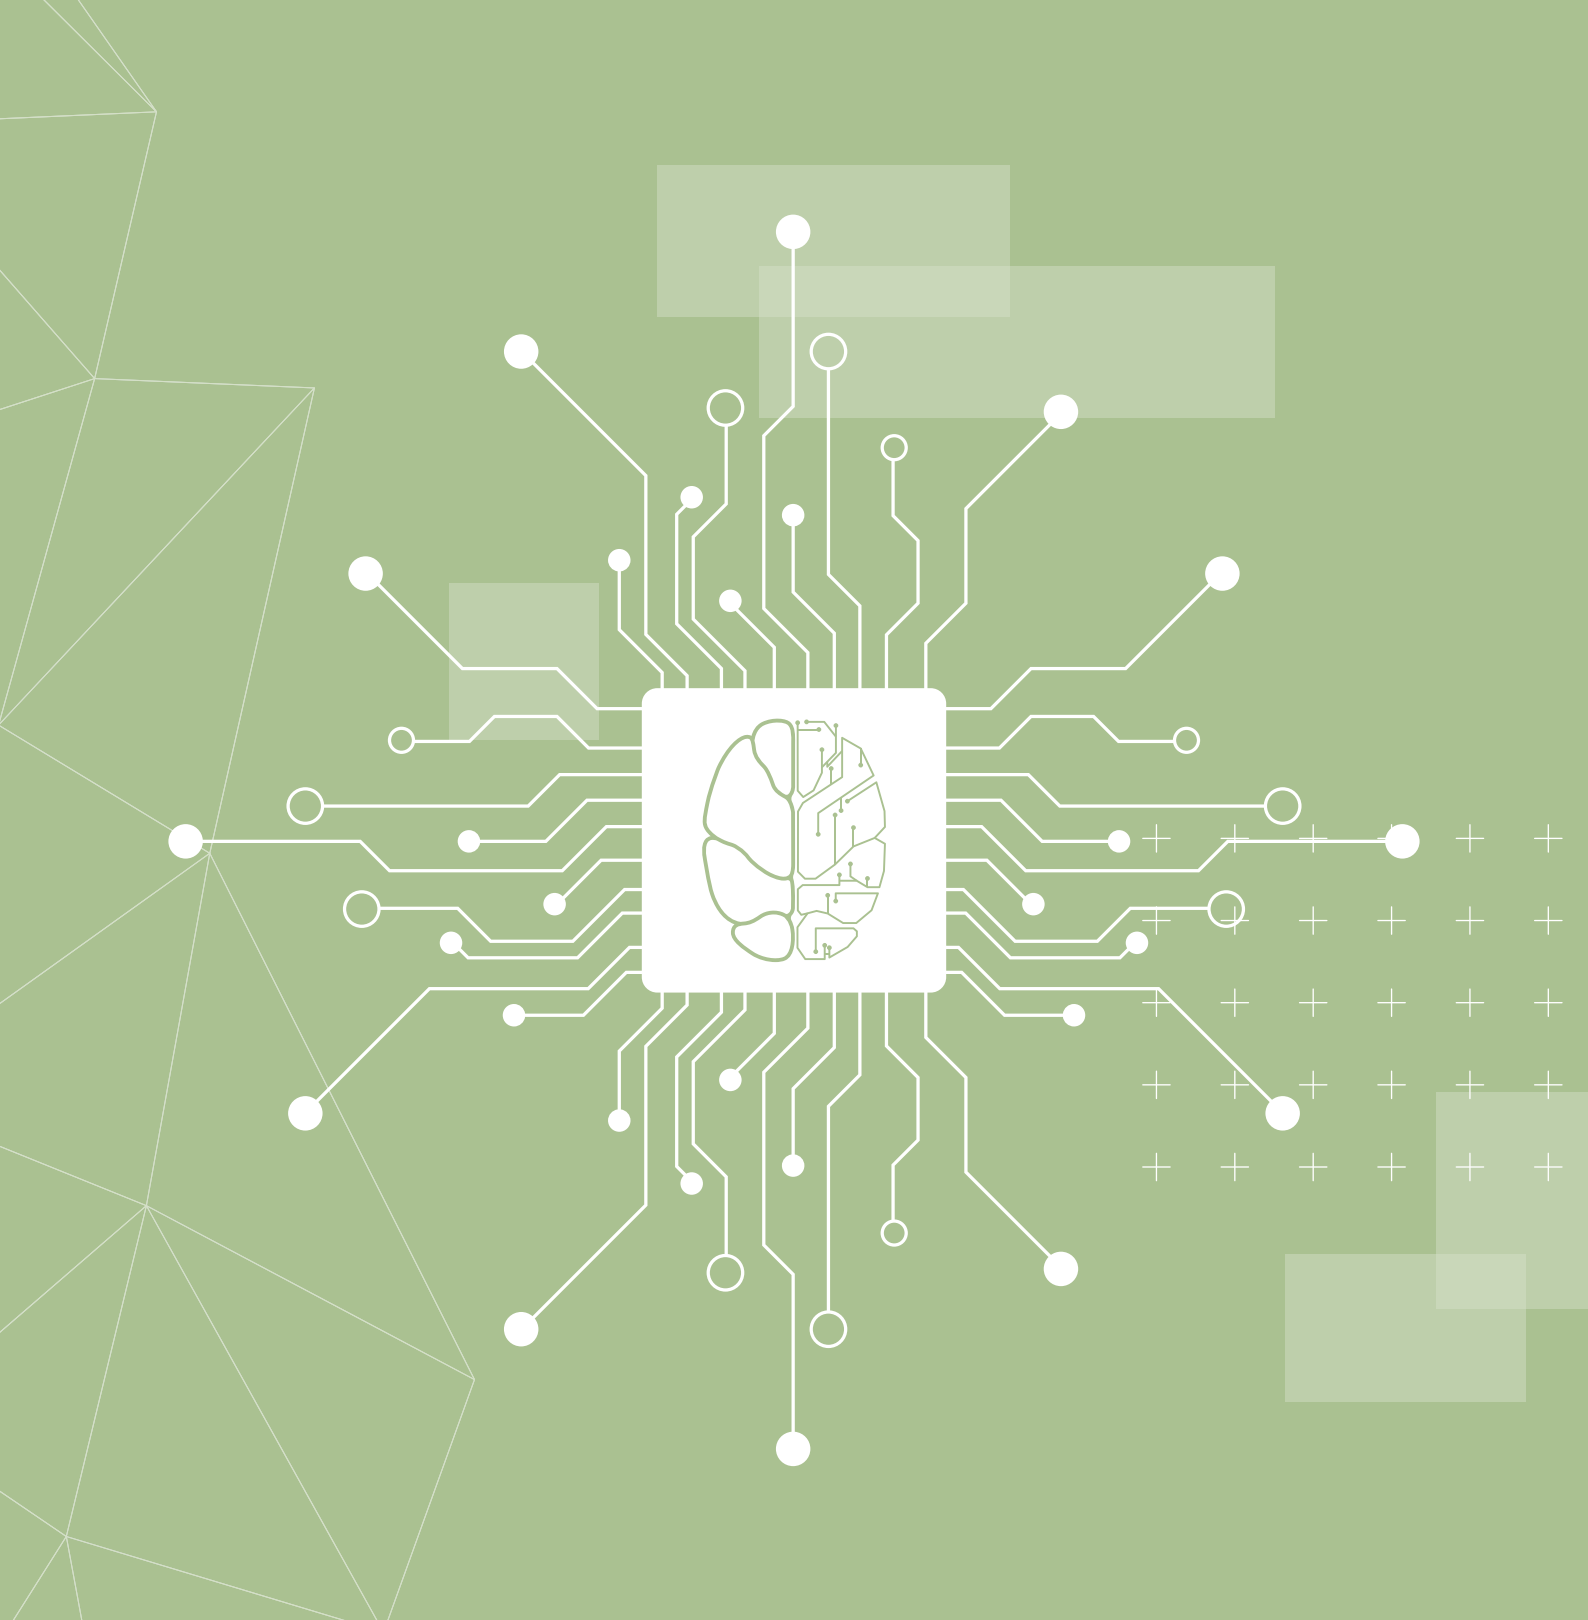

Q: How much time commitment is required?

About 12–15 hours spread over 6 engaging modules.

Q: What will students gain at the end?

Confidence in using AI tools, a portfolio of projects, and certification of completion.
